PROFESSIONAL SUMMARY

Backend engineer designing data-intensive traceability systems, including EPCIS file ingestion/generation pipelines and multi-variant XML integrations over SFTP. Built multi-agent AI architectures and RAG-based QA systems for production use.

EDUCATION

Keshav Memorial Institute of Technology

2022 – 2026

Bachelor of Technology in Computer Science – **CGPA: 8.74**

Hyderabad, Telangana

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, Go

Web Technologies: React.js, Django, Django REST Framework, FastAPI, Flask, Node.js, REST APIs

AI & LLM Tooling: OpenAI Agents SDK, RAG, Multi-Agent Orchestration, Vector Databases

Databases: PostgreSQL, MongoDB, MySQL

Cloud & DevOps: AWS (EC2, EBS, VPC), Docker, Kubernetes, Helm, GitHub Actions, Git

EXPERIENCE

AltiusHub 

Jun 2025 – Present

Software Engineer (GET) – Promoted from Software Engineering Intern (Jun 2026)

Hyderabad, India

- Redesigned a sequential background job into **concurrent, non-overlapping executions** using DB-level process locking, preventing small jobs from starving behind large ones and **improving overall job throughput**.
- Architected and built **Helix**, a multi-agent AI harness on the **OpenAI Agents SDK** that answers platform questions using real-time data, enforces **RBAC**, and auto-generates visualizations; added full-text navigation shortcuts that **cut navigation time from 3–4s to 1s**, now used internally and in client onboarding.
- Built **AltiusHub AI**, a **RAG-based** compliance chatbot (FastAPI, React, MongoDB, OpenAI) answering questions across **9 regulatory bodies**, driving marketing lead capture and internal team QA.
- Built **EPCIS Workbench**, a GS1-compliant EPCIS parser, validator, and generator with an inline XML editor and EPC encoder/decoder, used by marketing and client teams to validate traceability files.
- Cut memory usage of a file-generation service from **5–6GB to 1–2GB** by refactoring to chunked database reads and indexed query caching, **eliminating recurring OOM failures**.
- Reduced build-runner memory usage by redesigning asset storage with **deduplicated blob storage**, eliminating container OOM kills during builds.

PROJECTS

SkillSage (AI Mock Interview System)  | [PERN Stack](#), REST API, AI, WebOS

04/2024

- Developed and deployed a **full-stack AI interview platform** used by **150+ students** at NGIT with a **4.2/5 satisfaction rating**.
- Implemented **text and voice-based interviews** with **AI-driven question generation** based on resume and topic context.
- Developed **multi-tier admin dashboards** and a **WebOS-compatible LG TV interface** for monitoring interview sessions.

OU Results Scraper Tool  | [Python](#), Flask, HTML, CSS, JavaScript

09/2023

- Built a web scraper automating Osmania University result processing, reducing manual entry from **2–3 days to under 1 minute**.
- Processes up to **200 student results per minute** using **multi-threaded scraping**.
- Currently **deployed and used** by exam branches of NGIT and KMEC to streamline result workflows.
- Live:** ou-ngit-kmit-rywa.onrender.com

ACHIEVEMENTS & AWARDS

- Top 25 Finalist – Bhasha Bandhu Hackathon (Microsoft Azure & Bhashini API), ranked among **Top 25 teams nationally**.
- Finalist – HackXcelerate Hackathon by **Microsoft** and **ByteXL** at CBIT, among participants from **20+ colleges**.
